

COMP305 WORKSHEET 1: BASIC SCENE

Version 1.1
Computing
COMP305

Brian McDonald, John Speakman

Introduction

In this worksheet you are going to build a basic scene, which will involve loading and rendering of 3D models; these models should be textured mapped. There should also be some form of interactivity which will allow the user to navigate the scene.

To complete this worksheet, build an application which implements the following:

- (a) **Loading** of 3D Models
- (b) **Placement** of 3D Objects in the scene
- (c) **Loading** of Textures
- (d) **Rendering** of Objects with basic shaders
- (e) **First Person Controls** using keyboard and mouse

Submission instructions

Continue using the repository from Worksheet 1; you should consider creating a new branch for this worksheet

You should complete a pull request before the hand-in on **Monday by 4pm on Week 6**. Feedback will be given in the pull request and in class.

Marking Rubric

Criterion	Weight	Fail	Adequate	Competent	Very Good	Excellent	Outstanding
COMPUTE	20%	- No working artefact, artefact crashes consistently or implementation does not demonstrate coding proficiency.	- Interaction: mouse and keyboard or controller input interacts with the graphics artefact	- Achieve adequate proficiency - Loading of 3D Models - Placement of 3D Models - Rendering of objects	- Achieve competent proficiency - Loading of Textures	- Achieve very good proficiency - Some evidence of software design - Some evidence of re-usability (functions, classes, inheritance)	- Evidence of good software design (unit tests, static code analysis) - Evidence of re-usability (Framework is compiled into a library and can be reused)
